

Patrouille Suisse X-tension

Good to know

**Airshow Axalp Oktober 2009
for FSX**

**Addon Extension for Microsoft
Flight Simulator FSX
with Patrouille Suisse Version 1.**

- **Microsoft Flight Simulator X with Acceleration Pack**

If you have not installed Acceleration Pack, some minor visibility problems may occur but which will not affect the functionality. For instance, it could be that the braking parachute is not visible after touchdown. Spectators at the airbase Emmen are also not visible without Acceleration Pack.

- **2D-panel activated at start of missions**

At the start of the missions, the view mode of the 2D-panel is activated. This is done on purpose in order to switch on all instruments and functions. With the key "A" on your keyboard, you can change to the view mode of the virtual cockpit.

- **Operating status of instruments and functions**

At the start of most missions, the 2D-panel is visible in order to initialize and switch on the necessary instruments and functions. Scroll through the visibility mode using the key „S" on you keyboardund and select the virtual cockpit or any other view mode you prefer.

- **Ground Proximity Warning System (GPWS)**

As you will be flying very low during the flight to the range Axalp, you may find the GPWS annoying. The GPWS can be switched off by pressing the appropriate switch in the 2D cockpit (see picture to the right).

- **Operating the speed brake**

Air speed plays an essential role during formation flying. In addition to a reduction in thrust, the speed brake helps to quickly reduce air speed. It is therefore recommended to assign the speedbrake to a button on the joystick

- **Screen saver**

Since missions like the entire training sessions last for more than 20 minutes, it is important to either turn off the screen saver or to set it to approx. 30 minutes.

- **Simulation rate**

Do not change the simulation rate when running a mission. The speed of the replay will **not** change but the speed of the simulator.
